

Appster – Privacy Policy

Last Updated: 07/12/2025

Overview

Appster (“the App”) is a project management and budgeting tool designed for developers, students, and small teams. The App helps you organize projects, track budgets, manage tasks and bugs, and capture notes. This Privacy Policy explains how Appster handles your information.

Data Storage & Security

Appster stores all project data—such as tasks, notes, budgets, categories, and app settings—locally on your device. No personal data, project content, or usage information is transmitted to external servers by default.

If the App uses iCloud sync (when enabled), your data is securely stored and managed through Apple’s iCloud services. All data synced via iCloud is governed by Apple’s security and privacy policies.

Appster does not access or store your passwords, authentication tokens, or system-level identifiers.

Data Collection

Appster does not collect, track, or share personal identifiers such as your name, email, IP address, device data, or usage analytics.

If crash reporting or optional analytics are enabled through the system, any data collected is handled by the platform provider (e.g., Apple) and not by the developer.

Budget & Notes

All budgets, spending, tasks, bugs, notes, and project details remain on your device or within iCloud if syncing is enabled. No data is transmitted to the developer.

Payments

If Appster offers premium features or subscriptions, all payments are processed exclusively through Apple's App Store. The App never receives or stores any payment information.

Your Responsibilities

You are responsible for maintaining access to your device and any iCloud backups. Deleting the App without a backup may result in permanent data loss.

Children's Privacy

Appster is not intended for children under 13 and does not knowingly collect data from minors.

Policy Updates

This Privacy Policy may be updated. Changes will be reflected in the App Store listing or within the App.

Contact

For privacy questions, contact the developer through the App Store support page.
